

How do you determine whether something is a city?

I checked the city listed in the Berecruitment API against the information provided by the (<https://api.api-ninjas.com/v1/city>) api, which provides the real name of the city if the cities match, the city will be stored.

Any limitations or assumptions

Nothing as such

API URL : <http://3.108.227.128:3000/api/v1/cities?country=Spain&page=2>

Country available : Poland, Germany, Spain, France

Instructions :

In the above url you can check different country data by passing country available data mentioned above in country params and change page number by passing number in page params.

Code Flow
